Add-on architecture and tools AutoCAD Full Crack is a database application that maintains a model (drawing database) of all objects in a drawing. The user's changes are stored in this model; this model is called the history. The history provides the information that is used by the drawing tools in their operations on the drawing. History data may be accessed in many different ways. For example, a LISP script can manipulate and update any of the database objects. This allows application development using a language familiar to most CAD users. Psychometric evaluation of the Dutch version of the Motivated Strategies for Exercise Questionnaire. The Motivated Strategies for Exercise Questionnaire (MSEQ) was developed to describe the psychological motivations for exercise, covering five psychological needs: Autonomy, Competence, Relatedness, Exercise Self-efficacy, and Exercise Enjoyment. Previous studies suggest that the MSEQ-total score is reliable and valid, but to date only the English version of the questionnaire has been validated. Therefore, the aim of this study was to investigate the psychometric properties of the MSEQ-Dutch version. Adults who had never previously participated in regular physical activity (N = 260) completed the MSEQ-D. The psychometric properties of the MSEQ-D were explored using a confirmatory factor analysis, known-group comparison and internal consistency reliability. The MSEQ-D showed adequate internal consistency reliability for the total score (α =.80), as well as for the Autonomy (α =.82), Exercise Self-efficacy (
